AIA’s 10 Principles for Livable Communities

Communities across the state have become increasingly concerned with issues of livability. When the residents of a community create their own plan for the future, they are more likely to trust it and feel a sense of stewardship that will keep the plan relevant, useful, and adaptable to change over many years.

- Because architects can listen to a community's needs and translate them into visible and viable options, architects are a valuable resource to communities seeking to improve their quality of life.
- Good design makes economic sense — an attractive community will draw new residents, jobs, and investment.
- Working together, community members can create a vision of what they want their community to be and then implement it.

1. Design on a Human Scale
Compact, pedestrian-friendly communities allow residents to walk to shops, services, cultural resources, and jobs and can reduce traffic congestion and benefit people's health.

2. Provide Choices
People want variety in housing, shopping, recreation, transportation, and employment. Variety creates lively neighborhoods and accommodates residents in different stages of their lives.

3. Encourage Mixed-Use Development
Integrating different land uses and varied building types creates vibrant, pedestrian-friendly and diverse communities.

4. Preserve Urban Centers
Restoring, revitalizing, and infilling urban centers takes advantage of existing streets, services and buildings and avoids the need for new infrastructure. This helps to curb sprawl and promote stability for city neighborhoods.

5. Vary Transportation Options
Giving people the option of walking, biking and using public transit, in addition to driving, reduces traffic congestion, protects the environment and encourages physical activity.

6. Build Vibrant Public Spaces
Citizens need welcoming, well-defined public places to stimulate face-to-face interaction, collectively celebrate and mourn, encourage civic participation, admire public art, and gather for public events.

7. Create a Neighborhood Identity
A "sense of place" gives neighborhoods a unique character, enhances the walking environment, and creates pride in the community.

8. Protect Environmental Resources
A well-designed balance of nature and development preserves natural systems, protects waterways from pollution, reduces air pollution, and protects property values.

9. Conserve Landscapes
Open space, farms, and wildlife habitat are essential for environmental, recreational, and cultural reasons.

10. Design Matters
Design excellence is the foundation of successful and healthy communities.
